

Global HRIS Governance & Workforce Risk Overview

Executive Board View | 1,200 Employees | Multi-Division Structure

01. Executive Overview
02. Attrition Risk Cockpit
03. Workforce Planning
04. Data Governance & Architecture

Pilar 1 - Business Objective:
Goal: Mitigate critical talent turnover and quantify replacement exposure during enterprise HRIS rollout (SAP S/4HANA / Workday migration).

Pilar 2 - Technical Approach:
Architecture: Star schema data modeling, automated M-Code ETL pipelines, condition-weighted DAX measures, and dynamic risk tiering algorithms.

Pilar 3 - Business Value:
Financial Footprint: Real-time visibility into **\$70.8M** baseline salary expenditure and **198.6 FTEs** under projected attrition exposure.

Governance Dictionary			
Field / Measure ▼	Logic & Definition	Source Type	Business Impact
Workforce Financial Exposure	DAX Measure plus replacement costs (100% base salary) for flight-risk talent.	DAX Measure	Quantifies total financial risk exposure for CFO visibility.
Risk Tier Column	Categorizes active employees dynamically using PERCENTILEX.INC thresholds (P75, P50).	Calculated Column (Employee_Master)	Establishes dynamic segmentation into High, Medium, and Low risk bands
Projected Attrition	Applies calibrated risk exposure coefficients (35% High, 19.5% Medium, 5% Low) across active headcount.	DAX Measure	Forecasts expected headcount attrition per division.
Normalized Risk Score	Weighted algorithmic score combining Tenure, Performance, and Engagement flags.	Calculated Column (Employee_Master)	Base metric for employee flight risk probability.
